Iridium AxcessPoint Wifi

Iridium AxcessPoint allows you to create a Wi-Fi hotspot by connecting to your Iridium satellite phone and establishing an Internet connection – from anywhere on the planet. With Iridium AxcessPoint connected to an Iridium phone, you are able to use your smart phones, tablets and laptops.

Iridium AxcessPoint Mail & Web software has been specifically designed to use the power of the Iridium network to accelerate email messaging and web browsing when used with Iridium satellite phones and compatible Wi-Fi devices. This software includes an email client and connection manager that is specifically designed for the Iridium network. You can draft and view emails offline and queue them up to be sent while connected at speeds up to 15x faster than standard web-based email, as well as configure email sizes to minimize your connection time.

Overview

Combined with your Iridium satellite phone, Iridium AxcessPoint creates a Wi-Fi hotspot, wherever you are in the world, enabling you to use your smartphone and/or laptop to check emails and stay connected to the office, or keep in touch with family and friends – anytime, anywhere. Usage charges are billed per minute once the Internet connection is established, until you disconnect your Iridium AxcessPoint.

Included with Iridium AxcessPoint device is Iridium AxcessPoint Mail & Web that accelerates email messaging and web browsing when used with Iridium satellite phones and compatible WiFi devices. You can draft and view emails offline, queue them up to be sent at speeds up to 15x faster than use of standard web-based email, and configure email size to minimize your connection time.

Iridium AxcessPoint Mail & Web can also be set up to retrieve emails from external accounts, ensuring that you are always connected to your office and family anywhere on Earth. Iridium AxcessPoint Mail & Web blocks pop ups, removes ads, background images and compresses the webpage for download speeds three to five times faster than uncompressed pages.

Features
Ease of Use

- Connection Manager that starts/stops connection
- If call drops, will recover and continue sending without action from user
